Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The following was inserted as a new line 1 in the specification:

--This application is a Rule 371 application based upon PCT international patent application PCT/US03/18875 filed June 13, 2003, which claims priority to U.S. Provisional Patent application Serial No. 60/389,212 which was filed June 17, 2002, and which is hereby incorporated herein by reference.--

Reasons For Allowance

The following is an examiner's statement of reasons for allowance: the pending application is a Rule 371 based continuation application of PCT/US03/18875 and contains the same claims as the PCT application. In the PCT application the claims were indicated as defining over the prior art of record, and since no new intervening prior art has been found the present claims are also allowable over the prior art of record. Claims 1 and 18 set forth a patient positioning apparatus that includes a vertically positionable patient support, a mattress with a sheet, a sheet gripper, a first tether that pulls upon the sheet as the patient support is moved, and at least one spring biased winder to wrap at least one first tether into a taut position. The spring biased winder is not shown or suggested by the prior art of record. See the cited patents to Staag,

Art Unit: 3673

Crane, and Sverdlik et al for the closest art found-these patents show the claimed subject matter with the exception of the spring biased winder. Since there is no teaching of the winder claims 1 and 18 and their dependent claims are allowable over the art of record. Claim 21 is similar to claims 1 and 18, except that it sets forth a winder with a coupled ratchet assembly to pull on the first tether. No teaching of a coupled ratchet assembly attached to a first tether is present in the art of record. Claim 25 sets forth a tether control unit with two distinct modes of operation, this tether control unit has not been found in the art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Holberg, Cowan, Skeffington, Elze, and Votel show invalid transfer systems that use horizontally slidable sheets which can be wound upon a roller assembly or assemblies which are of interest.
